

Slide door between main cage  
and transfer run. Door was galvanized  
coated.

4/10/2004

Slide door between wolf cages. Field constructed door (schedule 40 galvanized poles and chain link) was used with our top rail and bottom guides. The top rail has a simpler 90 degree angle steel setup that's screwed to the vertical poles. The top rail and roller setup is the same used with the welded doors.
